30 years of innovation and design.
30 years of Plados.

30 YEAR
ANNIVERSARY

 **PLADOS**
THE SINK THAT BREATHES

plados ariapura

brings the sky in the kitchen

- Not only purifies the air in the kitchen, but also performs an antibacterial action making the sink fresher and cleaner.
- It is present in the whole mass of the sink.
- It has an unlimited duration.
- It remains active and maintains its complete effectiveness over time even in the event of wear and scratching of the surfaces.

ARIAPURA

Plados sinks are provided with the patented ARIAPURA technology which performs a triple action:

- ANTI-POLLUTANT
- ANTIBACTERIAL
- SELF-CLEANING

The composite material of Plados sinks is equipped with **titanium dioxide (TiO₂) nanoparticles** which contribute to:

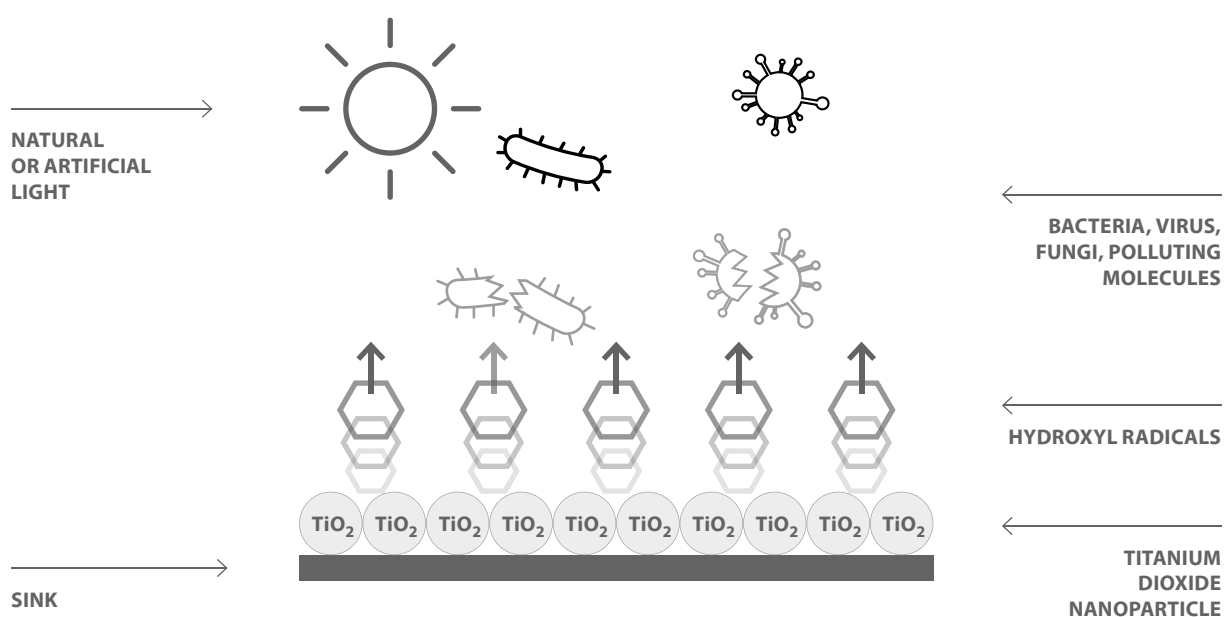

- **REDUCE AIR POLLUTION**
- **PERFORM AN ANTIBACTERIAL ACTION**
- **MAKE THE SINK EASIER TO CLEAN**

HOW?

Activated by natural or artificial light, titanium dioxide triggers a phenomenon called photocatalysis, capable of transforming polluting substances present in the environment into harmless mineral salts.

Titanium dioxide nanoparticles are able to **exploit light** and make chemical reactions take place in other nearby molecules (photocatalysis): when light hits the Titanium Dioxide particle, it causes the formation of **hydroxyl radicals** on its surface. The radicals have a very strong oxidizing power. This means that bacteria, viruses, fungi and polluting molecules, coming into contact with the radicals, begin to oxidize and degrade into harmless mineral salts. It is also important to know that the radicals have a very short half-life (about 1 nanosecond) and therefore do not represent a danger to humans.

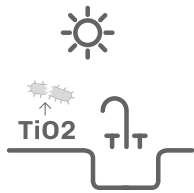

PHOTOCATALYSIS:

NOTE: ARIAPURA antibacterial protection is not present in taps, accessories, appliances and hoods. By "100% ANTIBACTERIAL" we mean that the antibacterial component is present not only on the surface but in the entire mass of the sink. ARIAPURA technology does not replace normal hygiene and cleaning practices.

Cooking food generates fatty vapors and fumes, in addition, cigarette smoke, particulate matter from the outside or from heating and air conditioning systems are easily spread in the domestic environment.

The photocatalysis that occurs on the sink by means of titanium dioxide nanoparticles is capable of **destroying** polluting molecules.

The reduction of pollutants leads to a significant reduction of bad smells, both on the sink and in the kitchen air, making the environment fresher and healthier.

ARIAPURA

anti-pollutant ACTION

antibacterial

ACTION

The sink is often used as a food preparation area. By coming into contact with foods that end up on the table, a sink can transmit bacterial infections. **ARIAPURA** reduces this risk, giving more tranquility and security to the whole family. The antibacterial action exerted by **ARIAPURA** also leads to a **significant reduction of odors on the sink itself, in the sink area, where the organic waste bin is often placed, and in the surrounding air making the kitchen environment fresher and healthier. It inhibits the development of bacteria** while maintaining, with normal cleaning and hygiene practices, the sink fresher and cleaner between uses.

A 100% ANTIBACTERIAL SINK

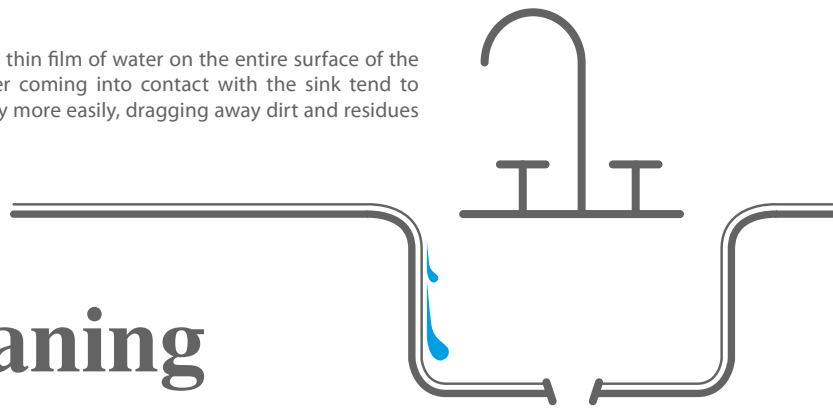

The antibacterial action exerted by ARIAPURA is not a surface coating of the sink, but is an effect of the action of the nanoparticles incorporated in the entire mass of the product, for this reason:

- It does not reduce its action with subsequent washes and does not wear off over time.
- It remains active even in case of wear and scratching of the surfaces.
- It is safe, durable, effective.

ARIAPURA creates a thin film of water on the entire surface of the sink. Drops of water coming into contact with the sink tend to flatten and slip away more easily, dragging away dirt and residues that cannot settle.

self-cleaning ACTION

The titanium dioxide nanoparticles present in the material attract the water molecules, forming a **thin and invisible film on the entire surface of the sink**. In this way, the drops of water that come into contact with the sink tend to flatten and slide off more easily, **eliminating the deposit of residues on the surface**.

The sink, coming into contact with food that ends up on the table, may retain dirt. **The Plados sinks, the only ones equipped with ARIAPURA technology, have greater resistance to dirt and stains, making them easier to clean.**

A Plados ARIAPURA sink is dirt repellent. The unsightly limestone deposits no longer form on the surfaces. The sink is thus easier to clean and this reduces the use of detergents and **makes the Plados sink eco-friendly**, i.e. environmentally friendly. As in other cases, the self-cleaning action is an effect of the titanium dioxide nanoparticles incorporated in the entire mass of the sink, for this reason, **it does not reduce its effectiveness with subsequent washes, nor does it wear off over time.**

new

Rigorous, refined geometries and a perfect proportion between the width of the basins and the comfort of the drainer for the new and fascinating Infinity series.

The choice of a clean and rigorous design is aimed at enhancing the technological peculiarities of the new nanoSTONE finish, which gives greater strength to the structure of the sink and features of silk effect to the touch.

Characterized by extremely pure geometries and very large basins, the 3 models of the new Infinity series are also available in the nanoSTONE finish:

- Silky and smooth to the touch
- Easy to clean
- More resistant to shocks and thermal shocks

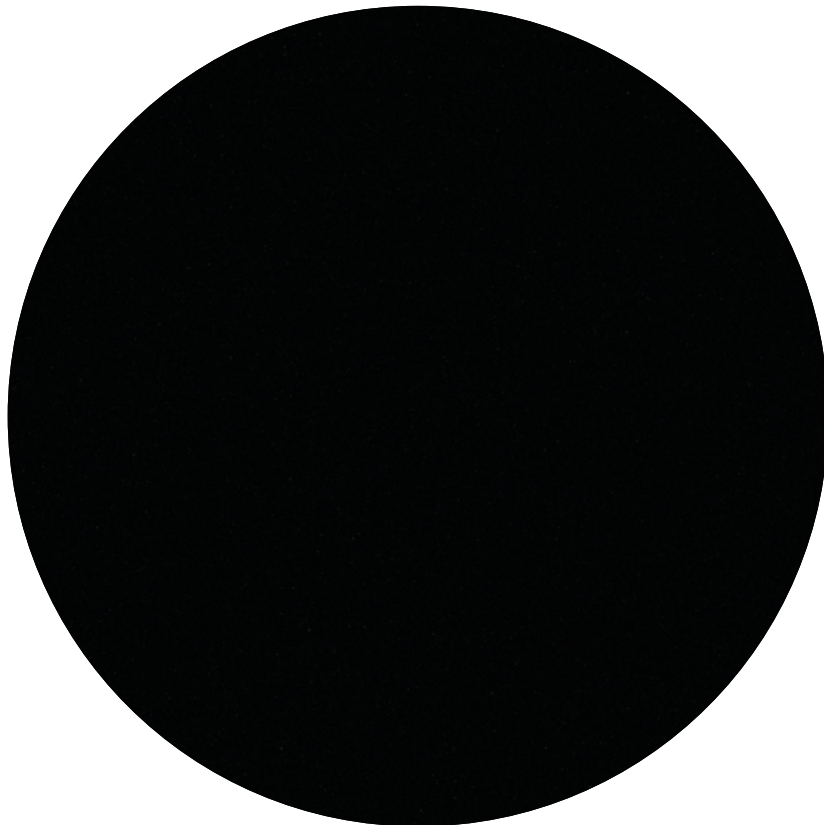

infinity

a high performance sink
with an attractive design

new finishes

color and brilliance
according to Plados

DEEP BLACK

The blackest black.

Intense and silky to the touch, elegant to the eye, the new Nanostone finish Deep Black is style, character and refinement.

The Plados color collection is enriched with two new trendy shades.

Deep Black, an absolutely innovative finish, has a silky and “soft” surface to the touch and thus facilitates cleaning and hygiene operations. At the same time, its internal molecular structure fortifies the sink, making it more resistant to shocks and thermal shocks.

Concrete is a very intense gray, with a metallic effect, capable of creating a particular environment with an industrial flavor.

CONCRETE

The hottest trend at the moment, a dark grey able to give personality and character to the rooms thanks to its soft texture and its metallic effect.

The Farmhouse sink is an absolute novelty for the Italian market. The inspiration comes from overseas: it is in fact one of the trendiest models in U.S. kitchens.

Despite being a single-bowl sink, LX8410 is reversible, because it has 2 different fronts: one with rounded corners and one with narrow corners. The front with rounded corners has been designed to match country settings, with softer shapes. The front with narrow corners perfectly matches the most rigorous contemporary settings. At the edges of the basin there are two rails on which various sliding accessories can be positioned.

farmhouse

a one of a kind sink
strong and everyday proof

series ONE

accessories that make the difference

Plados tailored accessories simplify your activity in the kitchen and transform the sink into a comfortable and functional work station.

Made in multiple finishes and geometries, all complements stand out for their very high quality, enhancing the elegant Italian design of every Plados sink. In particular, the ONE Series sinks become the centerpiece of your kitchen, thanks to a wide range of completely renewed accessories.

CLEANING PRODUCTS

The trend of coordinating the sink with the mixer, the hob, the oven and the extractor hood, both in traditional and modern kitchens, is widespread today. The compositions proposed by Plados in the kitchen allow you to create a truly unique and inimitable home environment.

color matching

contemporary excellence

plados

a partner without borders

PLADOS is one of the world's leading manufacturers of composite kitchen sinks. Thanks to products of the highest quality and great reliability, PLADOS, since 1991, the year of foundation, has managed to conquer an important position in the difficult international scenario of composite material sinks, obtaining important commercial results and unanimous approval in the world. PLADOS products are now exported to around 45 countries and 5 continents. The product range is completed with taps, hobs, ovens and extractor hoods available in the same colors of the sinks, allowing perfect and inimitable matching. For almost 30 years, Plados has had a specific mission: challenge the complex market of kitchen sinks, with design solutions and highly innovative materials and functions.

NanoSTONE sinks are guaranteed for 20 years against breakages due to thermal shock. MicroULTRAGRANIT and Ultrametel sinks are guaranteed for 10 years against breakages due to thermal shock. Ultraquartz sinks warranty is 6 years.

FRIENDLY

CE mark

The product certification attests that the products comply with the standards, guidelines or disciplinary sector and highlights the quality, the elements of excellence and the peculiarities that distinguish them. This certification process involves carrying out initial type tests on the product, the initial evaluation, the subsequent surveillance of the production process and finally, by means of laboratory tests on samples taken at the factory or on the market, the guarantee of the actual performance of the product with respect to the reference standards.

Traceability

In order to ensure maximum guarantee for the consumer, Plados has activated an internal procedure that allows to trace the production batch of the article and the components used at any time.

UNI EN ISO 9001
CERTIFICATO N.773 EA14

ISO 9001

The certifications define the requirements for the implementation of management systems aimed at conducting the various business processes in such a way as to improve their effectiveness and efficiency, both in the product realization phases and in the service delivery phases, obtaining and increasing customer satisfaction.

what makes a Plados sink so special

More than being the only ones equipped with ARIAPURA technology, able to perform a triple action (anti-polluting, antibacterial and self-cleaning), Plados sinks make the kitchen environment more pleasant and lively and integrate perfectly both in classic and modern environments.

20

STAIN RESISTANT

Plados sinks do stand everyday aggressive foods and substances very well. Dirt and stains can be removed by rinsing and gently wiping the sink.

SCRATCH PROOF

The high percentage of mineral charges present in the mixture makes Plados sinks very resistant to scratches, marks and wear.

HEAT RESISTANT

Plados sinks withstand thermal shocks, including the most severe ones, and very high temperatures (up to 280°) without being damaged.

IMPACT PROOF

Plados sinks have a very elevated superficial strength and they also are very tough. This protects the sinks from breakages or damages that may be caused by accidental impacts.

NON DISCOLORING

Colour is the identifying element of Plados sinks. Plados sink's colours remain bright and unchanged over time, even in case of frequent and prolonged exposure to sunlight.

HYGIENIC AND EASY TO CLEAN

Since the surface is not porous, the sink can be quickly cleaned by means of a standard detergent and the simple action of a towel or sponge. The sink is always fresh, clean and hygienic.

FOOD-CONTACT SAFE

Several tests carried out by independent institutes do certify Plados sinks complete suitability to food contact.

THERMO-INSULATING AND SOUND ABSORBING

Plados composite material sinks are also heat-insulating and sound-absorbing. They maintain the hot water longer, and absorb the noise of the jet of tap water.

finishes

and quality of Plados products

The wide range of Plados colors is divided into 3 finishes:

- nanoSTONE: the latest generation high tech material, guaranteed for 20 years.
- ULTRAMETAL: modern colors with a metallic effect.
- microULTRAGRANIT: the widest range with full colors or granite effect.

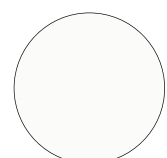

NANOSTONE

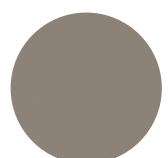

NanoSTONE, exclusive material of the latest generation, is composed of pure acrylic resin and a mix of high-tech mineral fillers, designed to bind to each other by developing a 3D lattice of "hydrogen bonds", through a chemical process possible thanks to the geometries and polarization of the minerals involved. The molecular network thus created **strengthens the internal structure of the sink, making it more resistant to impacts and thermal shocks.** The new composite material has a more robust structure and a silky feel to the touch. Like other Plados materials, nanoSTONE is added with titanium dioxide particles (**ARIAPURA technology**) which, through the photocatalysis process, **reduces the polluting agents present in the air in the kitchen, making the sink antibacterial and easier to clean.**

Here's what makes a nanoSTONE sink special:

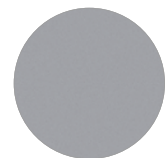

- High resistance to thermal shock
- Greater impact resistance
- Self-cleaning
- Anti-pollutant
- Antibacterial
- Guaranteed 20 YEARS!

N1 Pure White

N3 Argan

N4 Urban Grey

N6 Deep Black

ULTRAMETAL

The **metallescent particles**, present in the mixture together with quartz and granite crystals, create **metallic shades and finishes** in the sink surfaces. Cold colors, satin surfaces and metallescent effect make the Ultrametal sink particularly suitable for **modern settings** and for combinations with stainless steel appliances, often present in the kitchen.

An Ultrametal sink is easy to clean, very hygienic and resists scratches, chemicals, heat and high temperatures very well.

41 Aluminium

42 Titanium

14 Concrete

44 Black

64 Brown

microULTRAGRANIT

A very high surface concentration (over 80%) of quartz and granite microparticles generated by a sophisticated sedimentation process in the molding phase, gives the microULTRAGRANIT extraordinary aesthetic characteristics and a pleasant effect to the touch, associated with a very high surface hardness, resistance to chemicals, heat, scratches.

DIFFERENT COLOR SHADES

3

DIFFERENT MATERIALS

In recent years, the tap has acquired a growing personality in the kitchen and more and more often, consumers prefer a tap of the same color as the sink rather than chromed. The purchase of a sink and a mixer of the same brand is now customary and the market is constantly looking for high profile products. Offering a color-coordinated sink and tap, both in classic and modern settings, is a touch of color and class at the same time. Even in this type of proposal, Plados is unrivaled. For each color of the sink, a very wide range of matching mixers is offered, creating an inimitable coordinate in the classic, modern or minimal versions.

With a Plados sink, color enters to liven up the kitchen. Offered in many different shades, Plados sinks help to make the environment more pleasant and lively and integrate perfectly with both country kitchens and modern settings. Plados is also constantly looking for new finishes and new shades to offer to its customers. Numerous innovations are being studied for the various types of modular kitchens.

the mixer taps

always color-matching the sink

integrated sinks

linearity and resistance in a single block

The linearity of the latest generation surfaces or the resistance of the composite material? Why choose when you can have both? Plados, in collaboration with the major manufacturers of worktops, introduces integrated sinks: **bowl and worktop are worked and welded in a single product, obtaining a seamless solution**, with an aesthetic impact comparable to that of ultra-compact materials, but with the hardness and resistance of Plados sinks.

100% ECO
FRIENDLY

Our vision is to create a better everyday life for most people. This involves a long-term commitment for sustainability and a positive overall impact on the environment and humans. To achieve this, **Plados undertakes to propose its products, known for excellent quality, aesthetic appeal and functionality, at competitive prices and not at the expense of these two essential aspects: environment and people.** To translate into concrete action the sense of social and environmental responsibility, Plados promotes with great emphasis, **green products** allowing substantial savings of water and energy to the end customer.

Our environmental strategy is expressed in every stage of life of our products, from ideation to raw materials supply, from production to distribution and sales in stores, use, until the end of the life cycle, when the object becomes waste and must be disposed of or recycled.

Our suppliers undertake not to use child labour, according with laws and ethical, social and environmental values. Plados commitment to environment and social, is made of motivation, awareness and investments.

Model **LX8410** has the peculiarity of having two different fronts:

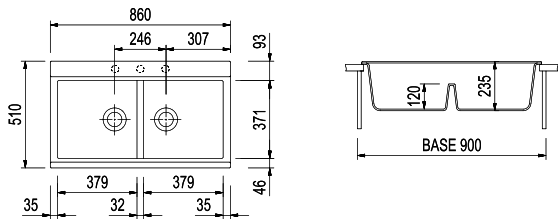

- One front has the least rounded corners, with a radius of 18 mm and a 35 mm wide perimeter edge to adapt to the most linear and rigorous kitchens in modern and contemporary environments.

- The opposite front has the most rounded corners with a 40 mm radius, and a wider perimeter edge, equal to 60 mm. These softer lines are the ideal combination for country kitchens, for those with a more classic or retro design.

SINKS

ONE

UNDERMOUNT
INSTALLATION

In the undermount version, the sink is trimmed on the back and front sides in order to reduce its depth. The proper hardware for installation comes bundled with the sink (code GANCIST10).

SINKS

ONE

**INTEGRATED
INSTALLATION**

In the version for integrated installation, the perimeter of the sink is milled both laterally and superficially; the corner of the basin, formed by the perimeter edge and the walls, is no longer rounded but forms a right angle. This process makes the perimeter edge perfectly flat and therefore suitable to be welded to the countertop.

SINKS

SPAZIO

A perfect mix of elegance and tradition in the design of Spazio series. The skilful balance between shapes, aesthetics and functions makes the Spazio line the most popular and requested. The practical drainer and the containment edge enhance the practicality and functionality of the sink.

UNDERMOUNT INSTALLATION

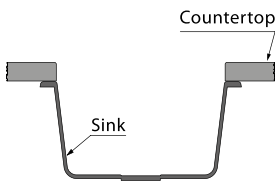

All Plados sinks can be installed in the traditional DROP-IN way; many can be installed under the countertop. The drawings show three typical ways of undermounting. The kit for undermount installation is already bundled in the packaging of the sinks prepared for such installation (ONE series for undermount installation). For all other models, the kit is available as an optional accessory (code GANCIST10).

Drawings to realize the countertop hole for undermount installation can be downloaded from our website www.pladostelma.com, in the **Downloads** section of each sink's page. Files are available in **DXF, DWG** and **PDF** formats.

SOLUTION A

The edges of the countertop and the sink coincide (Suggested solution).

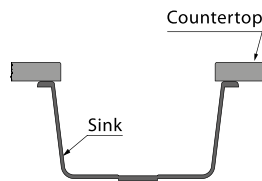

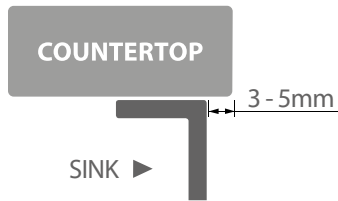

- This solution:
- Enhances aesthetics.
 - Facilitates cleaning;
 - Optimize hygiene.

SOLUTION B

The countertop extends beyond the edge of the sink, on all sides. The edge of the sink is hidden under the countertop.

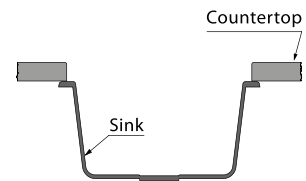

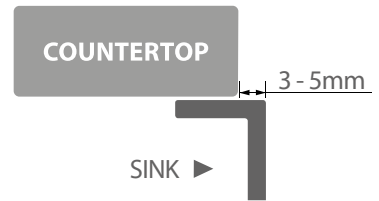

- This solution:
- Simplifies installation;
 - Facilitates cleaning.

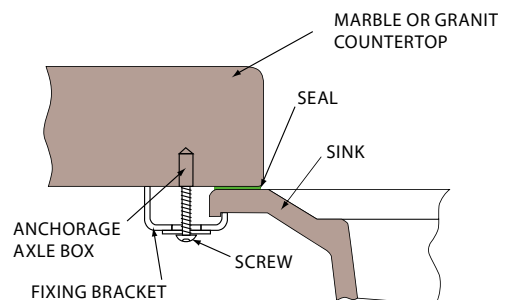

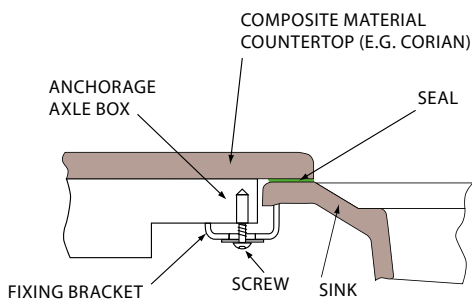

SOLUTION C

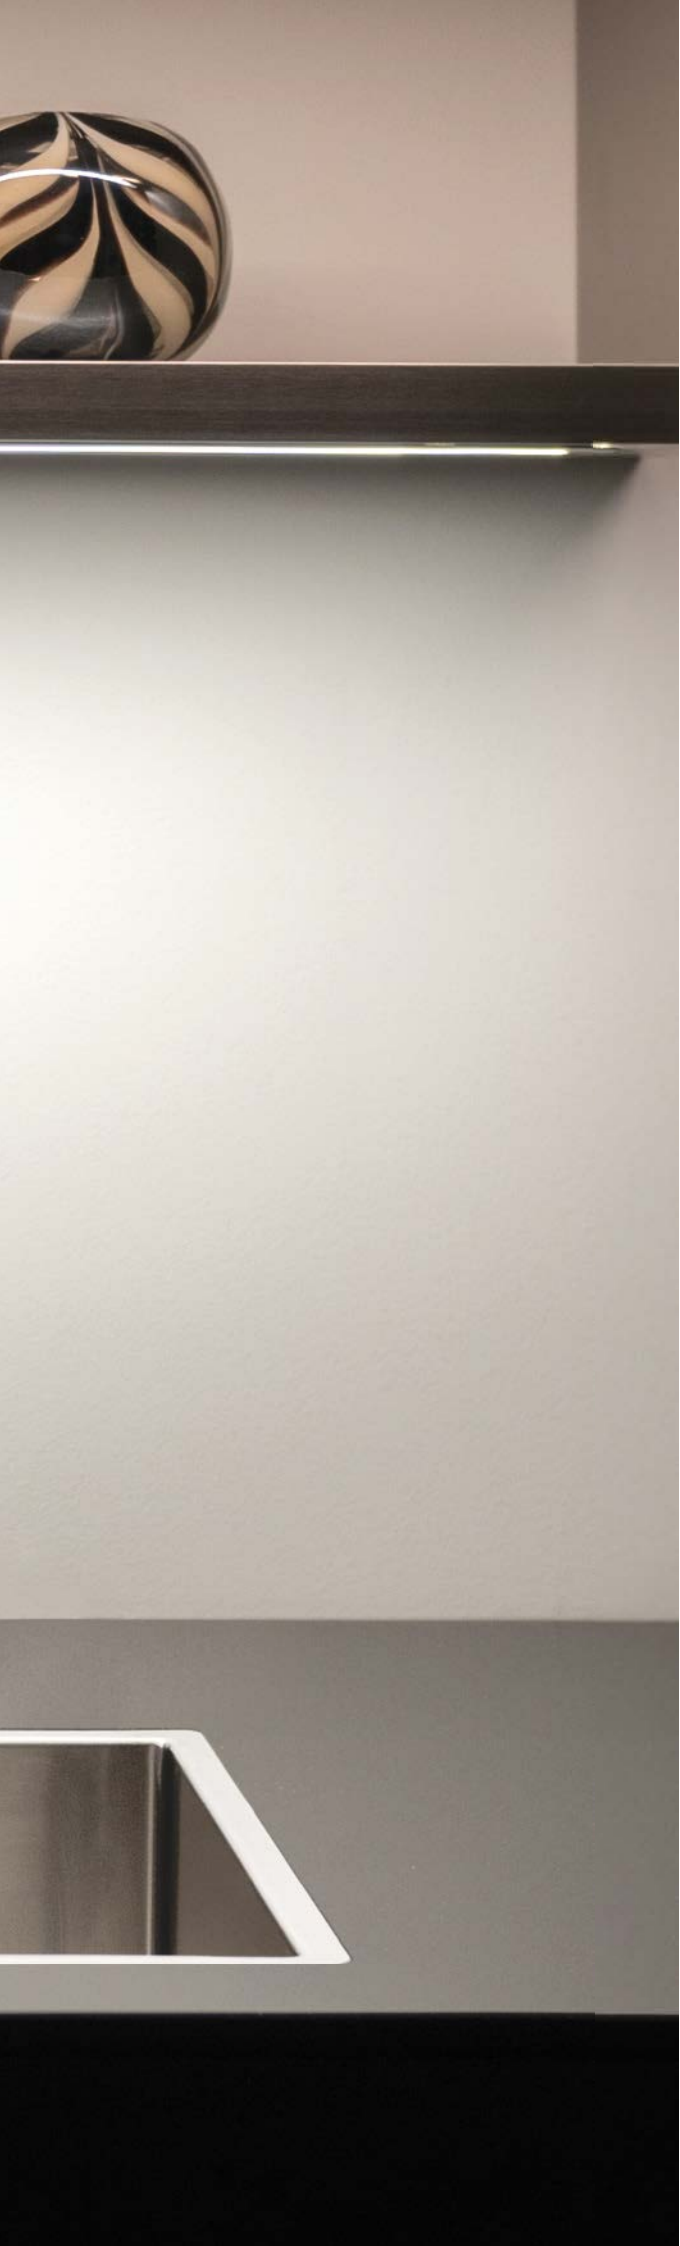

Sink's edge is partially visible.

- This solution:
- Facilitates cleaning;
 - Optimize hygiene.

PLADOS

ACCESSORIES

serie One

accessories that make the difference

BASIN COVER

A practical additional surface, useful during food preparation, ideal for sinks without a drainer.

BOTTOM GRIDS

They protect the bottom of the basin from accidental impacts and from contact with too hot pans.

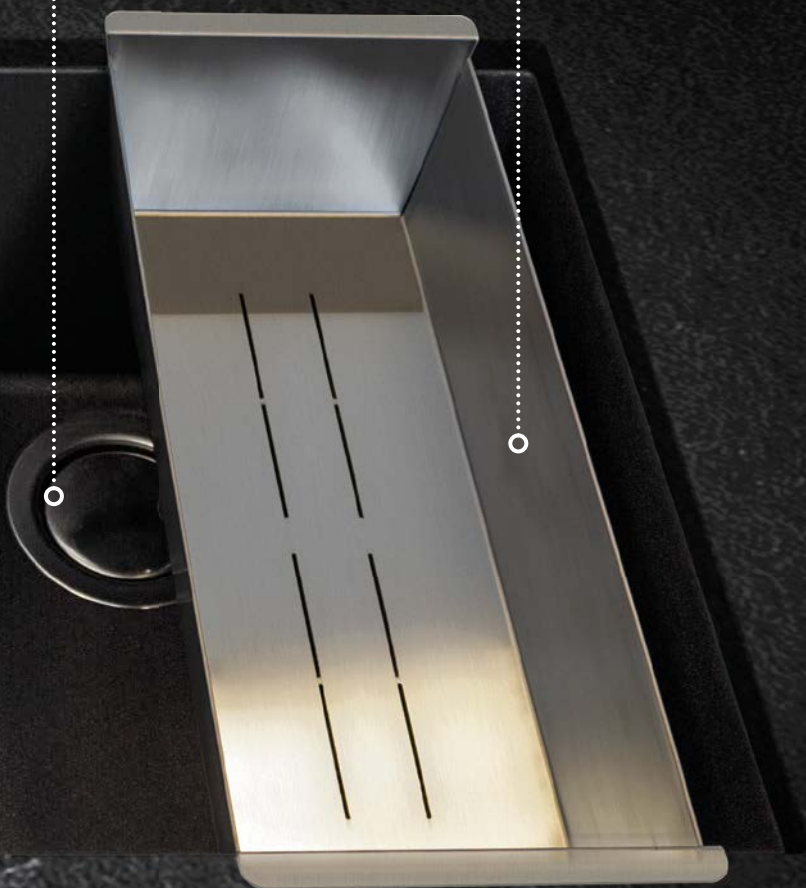

DRAIN COVER

An elegant accessory to hide the drain basket.

STAINLESS STEEL COLANDER

Suitable for both standard and undermount models, a colander has never looked so beautiful.

100% ECO FRIENDLY

132

EXTRACARE

EXTRACARE is a **descaling detergent for extraordinary cleaning**. Active against the most stubborn dirt, its formula has been **studied to avoid damaging the shine of composite sinks**. Thanks to its density it's easy to apply even vertically. The product dries really slowly, allowing its active components to react as long as possible. It's easy to apply and does not leave streaks.

PRICE € VAT excluded

- **Easy application, even on vertical surfaces;**
- **Delicate on acid sensitive materials;**
- **Active against the most stubborn dirt.**

BRILLCARE

BRILLCARE is a water based detergent, formulated with quickly biodegradable plant-derived agents, recognized and certified ECOLABEL. It is ideal for **daily cleaning of Plados sinks and all washable kitchen surfaces**. BRILLCARE respects surfaces and leaves no streaks.

- **Good degreasing power**
- **Leaves a pleasant scent**
- **Ecofriendly**

PRICE € VAT excluded

TERRA BIANCA

TERRA BIANCA is an anti-bacterial and non-abrasive paste cleaner that polishes and protects all surfaces, even the most delicate. The package contains a double sponge, with a soft side (white) and an abrasive side (blue). Cleans and degreases all kitchen surfaces, releasing a pleasant citrus fragrance.

PRICE € VAT excluded

WOOD, CRYSTAL, POLYETHYLENE CHOPPING BOARDS

Chopping boards in **Iroko wood**, **very high density polyethylene** or in **modern tempered glass**. Chopping boards are practical, functional and widely used accessories in the kitchen. They are **easy to clean** and allow you to prepare food without scratching the surface of the sink.

134

STAINLESS STEEL ACCESSORIES

Stainless steel accessories are **practical and hygienic**: **baskets and trays** are useful for **washing fruit, vegetables** or for draining pasta. The bottom grids protect the basin against scratches or accidental drops of metal objects, or allow you to place very hot pans (the bottom of a pan just removed from the fire can reach a temperature of 600 °C) which could irreparably damage the sink. The innovative **ROLLUP**, a "roll-up drainer" is very useful for all sinks without a dish drainer.

WASTE DISPOSERS

PLADOS WASTE DISPOSERS ELIMINATE FOOD WASTE IN A CONVENIENT, PRACTICAL AND SAFE WAY.

The waste deposited in the dustbin often causes disorder, dirt and bad smells, sometimes attracting annoying insects. The use of the garbage disposer allows you to eliminate this kind of inconvenience by facilitating domestic work. An indispensable aid for maintaining order and hygiene in the kitchen.

DISPOSABLE FOOD WASTE:

fruit, vegetables, fish bones, small bones, pasta, egg shells, walnuts, etc ...

BUNDLED ACCESSORIES

The following accessories are supplied with the Plados sinks:

- Stainless steel basket drain Ø90 mm (3"1/2) (as shown)
- Space-saving siphon designed for dishwasher and/or washing machine connection (as shown)
- Fixing brackets

Stainless steel basket drain Ø90 mm (3"1/2).

CODE **PILRV1**

1 way drain with overflow.

CODE **PILRV2**

2 ways drain with overflow.

Different kind of siphons can be supplied on request.

CODE **SIFV1**

1 way space saving siphon.

CODE **SIFV2**

2 ways space saving siphon.

All PLADOS sinks are individually packed in sturdy cardboard boxes. The most delicate parts of the sink are protected by special reinforcements.

CORRECT PROCEDURE TO DRILL THE MIXER HOLE

All Plados sinks are provided of pre-punched holes for mixer or accessories installation. Some models have many pre-punched holes (**pic. A**) in order to choose where to place the mixer or, for example, a soap dispenser.

ATTENTION!

To avoid sink breakage, the hole must only be completed with a Ø35-37 mm diamond bur, following the indications shown in figures B and C.

A - Pre-punched holes

B - Place the drill aligned with the pre-punched hole

C - Proceed with the completion of the hole

Video tutorial on drilling and installing the sink.

Upon request, and at an affordable price, Plados can supply both the complete kit for drilling the sink consisting of Shank + Bur (code **KITFRESA**), and the spare diamond bur (code **FRESA**).

The two elements, images D and E, are visible on the accessories page.

D - Kit Codolo + Fresa

E - Fresa diamantata Ø35-37 mm

MIXERS

- 144 **HIGH-TECH**
Mixers designed to offer more functionality and convenience in the kitchen.
- 148 **ELEGANT**
Modern, linear, elegant, they are the mixers that match contemporary and trendy kitchens, offered in many refined colors.
- 155 **INOXA**
The highly hygienic stainless steel mixers do not release toxic substances such as lead or copper, do not undergo corrosion processes and are ecological and recyclable.
- 157 **POLY-TECH**
Ecological mixers in technopolymer: non-toxic, hypoallergenic, recyclable, they do not contain and do not release heavy metals, light in weight and price.
- 158 **UNDER-WINDOW**
A sink installed under a window requires a collapsible mixer that does not interfere with the opening of the doors.
- 159 **BASIC**
The basic mixers, for those looking for simplicity, functionality and above all color, without sacrificing Plados quality.
- 163 **ANTIQUE**
Available in antiqued Bronze or Copper, but also in the more traditional Plados finishes to adapt to classic, rustic and country kitchens.
- 166 **TRIFLOW**
They allow you to manage 3 waters separately: the two mains water plus a third, for example water purified by a filtering system.
- 167 **CHARCOAL FILTERING SYSTEM**
The ideal complement for three-way taps capable of delivering separate water.
- 168 **SPARE PARTS**
To order a spare part it is necessary to specify the model code.

ITALIAN
TECHNOLOGY

Plados mixers work best if the following conditions are met:

- **Operating pressure: 1.5-5 bar**
- **Max temperature: 80 °C**

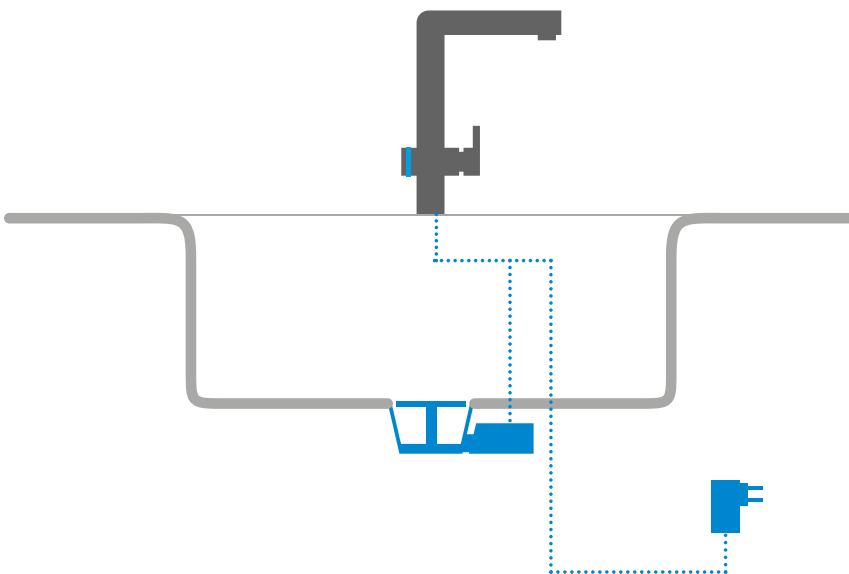

If a pressure higher than 5 bar is found, it is advisable to install a pressure reducer. Grains of sand or other impurities, always present in the water, can damage the mixing cartridge or the sealing gaskets, causing leaks in the mixer. The upstream installation of a pair of stopcocks with inspectable filter in the two flexible hoses for hot and cold water, preserves the mixer from said drawbacks.

Keep your hands clean! the drain is operated by **SMART-TAP**

146

Manually opening the sink drain to flush the water away is an often unpleasant operation, especially in the presence of dirty, oily water or with food residues. Smart-tap allows you to control the opening and closing of the drain through a touch sensor on the side of the tap. The status of the drain (open or closed) is indicated by an elegant LED ring placed around the sensor. When the drain is open the LED is off; when the drain is closed the ring turns blue.

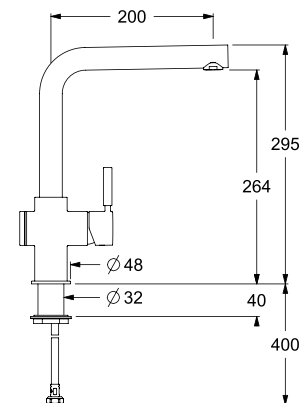

Once installed, the automatic drain included with SMART-TAP, must be connected to the mixer and to the power supply. Installation is quick and easy.

SMARTAP

Single lever mixer with 90° tubular spout and touch controlled automatic drain.

- Ceramic disks cartridge Ø40 mm (high)
- Spout rotation: 360°
- Installation hole: Ø35 mm
- Water inlet stainless steel hoses, L=35 cm

SMARTAP / 40

Innovative, practical, functional: LUMIX

The lever has been moved at the end of the spout, in order to be closer to the user and much more handy to operate. By touching a sensor under the spout you can turn on a LED light, very useful, for example during food preparation. The UV component of the LED light also helps to activate the **ARIAPURA** technology present in all Plados sinks.

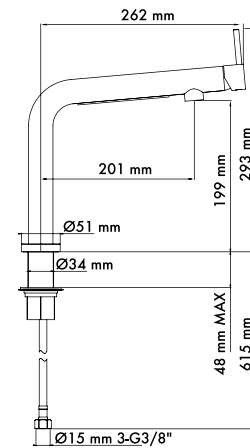

LUMIX is installed as a traditional mixer. The power adapter for the LED light is included in the package.

LUMIX

Single lever mixer with LED light touch operated.

- Ceramic disks cartridge Ø25 mm (low)

stainless steel mixers

100% ECO
FRIENDLY

ITALIAN
TECHNOLOGY

156

The PLADOS mixers of the INOXA series are manufactured with AISI 304 stainless steel. Stainless steel is a highly hygienic material and is increasingly used in the food industry, as it does not release toxic substances such as lead or copper, does not undergo corrosion processes due to part of atmospheric agents or from brackish water and it is completely ecological and recyclable.

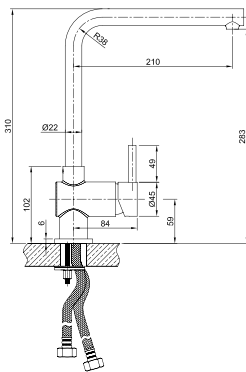

The stainless steel taps are not superficially treated, but are simply polished. This means that they remain unchanged over time without undergoing deterioration or aging processes.

INOXA31S

Single lever mixer with 90° tubular spout.

- Ceramic disks cartridge $\varnothing 35$ mm (high)
- Spout rotation: 360°
- Installation hole: $\varnothing 35$ mm

ITALIAN
TECHNOLOGY

POLYTECH, the eco-friendly Plados mixers, are completely non-toxic, recyclable and suitable for contact with food. The internal body of POLYTECH mixers is made with innovative technopolymers, which do not contain and do not release heavy metals into the water, such as lead, nickel and copper, which can be harmful to health.

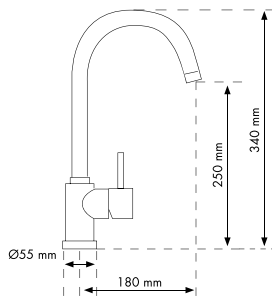

In POLYTECH mixers, the spout is in brass while the internal body is in Teflon[®]. The external body is in carbon fiber if painted or in ABS if chromed. Unlike traditional mixers with a brass body, in POLYTECH mixers limestone and other impurities present in the water slide off, avoiding progressive accumulations that could favor leaks and make the mixer more difficult to operate. The mixers are also equipped with the patented SEMPLIFIX[®] system that allows quick installation from above the sink. POLYTECH mixers are much lighter than similar-shaped brass mixers and are offered at very competitive prices.

triflow

three way taps

The TRIFLOW mixers allow you to manage three waters independently: the two standard (hot and cold) waters plus a third, for example the water purified by a filtering system or that coming from a storage tank. Inside the spout there are two separate pipes where the waters (the standard two in yellow, the purified one in blue) flow without ever coming into contact.

ITALIAN
TECHNOLOGY

Unlike the mixers of other manufacturers, the internal body of the Plados three-way mixers is made of **technopolymers** certified for contact with food, while the purified water dispensing tube is made of stainless steel or polyethylene, instead of brass: for the health of consumers this represents a huge leap in quality because it is known to all that brass in the passage of running water releases heavy metals such as lead, nickel and copper, all elements that are very harmful to health. In addition, the mixers are equipped with a sophisticated **double-lip seal** which ensures greater sealing even in the presence of particularly calcareous and aggressive waters.

FILTERING SYSTEM

Activated charcoal filters are the ideal complement for three-way taps capable of delivering separate water. Activated vegetable charcoal is a material with a highly porous structure capable of retaining many molecules of other substances inside. Activated charcoal filters retain impurities up to 5 microns, also exerting a bacteriostatic action.

The main feature of activated carbon is the high "specific surface" due to its high porosity: one gram of activated charcoal can have an internal surface equivalent to that of a football field! Pollutants, chlorine, unwanted odors, asbestos fibers, molds, algae and protozoan cysts, are retained within the porous structure of the activated charcoal, generating water free of harmful substances and ready to drink.

ADVANTAGES OF THE ACTIVATED CHARCOAL FILTERING SYSTEM:

- Preserves the environment by reducing the consumption of plastic bottles;
- Save effort, time and money, no longer having to buy and transport heavy bottles to your home, which you will subsequently have to dispose of;
- The installation and replacement of the filter is simple, fast and does not require the intervention of a technician;
- Once saturated, the filter automatically reduces the water flow until it stops, always ensuring quality water;
- The filter system takes up very little space and can be installed in the cabinet under the sink.

FILCAR - Filter cartridge

- Filtering material composition: Activated coconut charcoal
- Filter material composition: Aluminum, 100% recyclable
- Tested material composition: PVC, 100% recyclable
- Operating pressure: 0.7 to 8 bar
- Operating temperature: From 4 ° C to 38 ° C
- Type of maintenance: One-way
- Availability: 10 «/ 20»
- Filtration degree: 5 microns
- Flow rate: 1.9 L / min
- Quantity of water supplied: 11.370 L

Inlet water data:

- Max. pressure: 8 bar
- Min. pressure: 0.7 bar
- Max chlorine: 1.5 mg / L
- TDS: 2000 ppm
- Iron: Absent
- SDI: 5.0

Compliant with Ministerial Decree 25/2012 - All materials are non-toxic. Non-toxicity certificates carried out in a specialized laboratory, available on request. Product performance may vary depending on the flow rate and the quality of the incoming water. It is recommended to replace the cartridge at least once a year. The appliance must operate strictly in a vertical position.
